

for Windows® Media Center

Technical Sheet

HAI Makes Changing Lights, Temperatures, Security And More As Easy As Changing Channels!

HAI's multi-award winning Home Control for Windows® Media Center (WMC) (HAI part number 1109) is software that allows you to manage all of the features of your HAI home control system. This affordable, reliable solution allows you to have complete control over your viewing and listening environment.

A Windows® Media Center can play, pause and rewind live TV, play DVD's and CD's, store your digital music, videos and photos, browse the Internet, e-mail, and run Windows® applications.

HAI Home Control combines the sophisticated television, music, videos, and photographs of the Windows® Media Center with the elegance of lighting, security, whole home audio, and temperature control from your HAI home control system.

HAI Home Control for WMC requires a professionally installed HAI Omni family or Lumina family controller.

With HAI Home Control for Windows® Media Center, the Windows® Media Center neatly displays your HAI system's features. You get menus for lighting control, security, temperature control, macros, the event log, Whole

Home Audio interface and more. So you can settle in for a great movie with the lights, temperature and security adjusted exactly as you please.

Home Control has the ability to control many different audio systems, including Hi-Fi by HAI, and systems by NuVo, Proficient, Russound, SpeakerCraft, and

Xantech. When connected to an audio system that generates metadata (i.e. Song Title, Artist, Genre, Album Name, Channel Number, Channel Name, etc.), this information will be displayed.

RELIABILITY

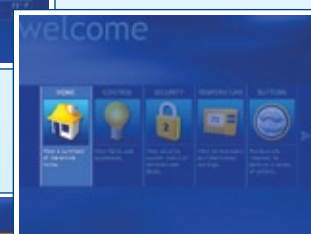

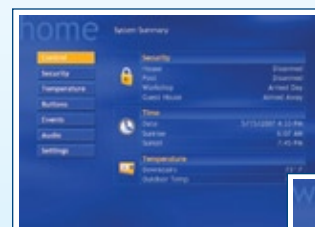

HAI's Home Control for WMC is built on HAI's award-winning family of home control systems and automation products.

CONVENIENCE

Easy to install. Just load HAI's Home Control for WMC into the Windows® Media Center System. A settings wizard will guide you through the steps to ensure proper connection and operation. No programming required.

EXPANDABILITY

Expand the capabilities of HAI's Home Control for WMC by adding the award-winning Web-Link II software for Internet access and control of security, lighting, and temperatures. Internet video surveillance and recording, as well as the ability to receive e-mails based on programmed events (i.e. the kids have arrived home from school, or a delivery package has arrived) is also available with Web-Link II. *

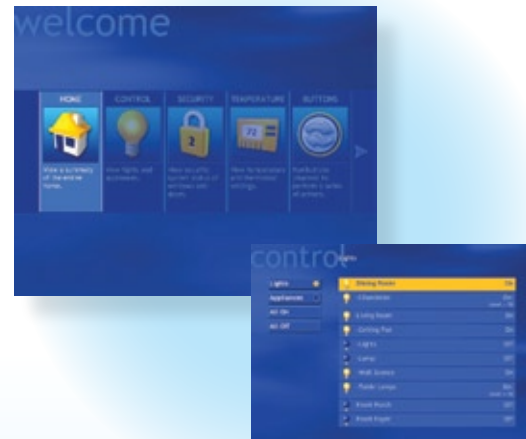

* HAI Web-Link II software may be purchased separately or bundled with HAI Home Control for WMC software. Additional equipment and cameras may be required. Web-Link II requires a Local Area Network.

The Following Are The Minimum Requirements For This Software:

- HAI Omni LT, Omni, Omni II, Omni IIe, OmniPro, OmniPro II, Lumina, or Lumina Pro controller with 1.8 firmware or later
- Windows® Media Center PC, 2 GHz processor or higher, Pentium IV, or equivalent (3 GHz processor or higher, Pentium IV, or equivalent recommended)
- Microsoft Windows® Vista Home Premium or Vista Ultimate (Home Control Release 2.5.7173 or higher), Microsoft Windows® XP Media Center Edition 2004 or Microsoft Windows® XP Media Center Edition 2005
- 512 MB of RAM (1 GB of RAM recommended)
- CD-ROM or DVD Drive
