

## Technical Sheet

WL3 for Windows® Home Server (HAI part number 1112) is an Add-in for a Windows® Home Server that allows you to monitor and control your HAI home control system from any device with a web browser, including the iPhone™ 2.0, iPod Touch™, BlackBerry™, Smartphone, computer, PDA, etc.

WL3 allows you to change your home's temperatures, adjust the lights or security settings, or view any supported camera securely and easily.

WL3 automatically configures supported UPnP IP cameras on your home network and allows you to manually configure other IP cameras on your network or cameras that reside anywhere on the Internet. It also allows you to view cameras in your home or from public IP cameras around town, such as traffic and weather cameras.

WL3 natively supports 60 IP camera models, however, most MJPEG and MPEG4 cameras should function properly. Setup is simple. WL3 will automatically discover the supported UPnP IP cameras and automatically configure them. Other cameras can be added by simply configuring the IP Address, Username, and password.

Regardless of the brand of camera, the video is displayed in the WL3 format so that all camera feeds have a consistent look and feel. Easily select any camera, choose the frame rate and screen

size, manually start and stop video recording, take a snapshot of the video image, and play, pause, or stop the video stream.

**WL3 can be accessed via a web browser, allowing for functionality on a multitude of interfaces.**

WL3 for Windows® Home Server can record video based on an event and/or send e-mails or text messages to inform you when an event has taken place. Recorded videos and snapshots are categorized and can be viewed anytime you log into WL3, locally or via the Internet.

The video can be played at normal speed or accelerated. There is even an option to step through each frame of the recorded video.

The Windows® Home Server is a central server that stores, organizes, protects, and allows you to share all of your digital photos, music, video, and documents, while running quietly in the background.

When the WL3 for Windows® Home Server Add-in is installed, it is continually monitoring your home. It can inform you of events such as the

alarm system being disarmed or activated, a car entering the garage/driveway, or even if the wine cellar door or pool gate has been opened.

WL3 for Windows® Home Server is customizable and allows you to change the user interface by applying different graphic and color schemes. You can also add RSS feeds for custom data, such as weather forecasts, sports scores, news, personal blogs, and much more, to your WL3 Home Page.

WL3 requires an HAI home control system equipped with an Ethernet port and Windows® Home Server. WL3 and HAI Web-Link II, Home Control for Windows Media Centers, Snap-Link and PC Access will work together as long as you do not exceed the limit of 3 simultaneous sessions.
