

HAI SNAP LINK Technical Sheet

Snap-Link (HAI part number 1120) is software sold on an USB key that plugs into any computer to securely monitor and control lights, security, temperatures, audio, and surveillance video over the Internet.

Sold without subscription fees, users may update to the latest version for FREE at any time.

With Snap-Link, monitoring and controlling security features is easy. Arm or disarm the alarm, view a security log, or select to bypass or restore an individual zone (area).

Security

Snap-Link helps you conserve energy while maintaining the comfort level within your home. Adjust heating and cooling by zone. View humidity and outdoor temperatures. Adjust the temperature in your home before leaving work.

Energy Management

Conveniently check and adjust your home's lighting scenes. Dim lights, set timers, control individual lights, or turn all lights on/off by room or by house.

Lighting Control

Select music source and adjust volume levels in individual rooms or whole house. Snap-Link can control Hi-Fi by HAI or an audio system from one of HAI's Connectivity Partners.

Whole Home Audio

Snap-Link has an "OmniTouch" theme that emulates the look of an OmniTouch Touchscreen. You can plug HAI's Snap-Link into a handheld device, such as the Ultra Mobile PC, and have Touchscreen access on a fully functioning PC that may be carried around the house. It places wireless home control in the palm of your hand!

Wireless Options

Use IP cameras to actually SEE your home from anywhere in the world! Scroll through cameras to view boat docks, front doors, pool areas, etc. Or use it to check up on sick or elderly relatives when you can't be physically present.

Webcams

All you do is plug the USB drive into any computer and Snap-Link becomes available.

There is no installation of the program, and when you are finished, just unplug the drive, leaving no residue of your home's information behind.

Keep Snap-Link On Your Keychain And Have Access To Your Home Whenever And Wherever!

You may setup Snap-Link to send alerts via e-mail, cell phone, or pager, based upon specified events.

For Example: Brenda gets home from school and enters her user code into the HAI Omni family home control system to disable the security system. Accordingly, an e-mail is automatically sent to her mother's work e-mail address informing her that her daughter is home.
